Comments :Cleaning has been done perfectly ,according to rules & regulations of the DM Authority					
<p>Recommendations for Improvement: All tanks should be cleaned bi-annually to ensure proper Hygiene and water safety. It is important to keep the storage tanks and supply lines clean to ensure free flow and to reduce possible damage to the supply line due to scaling and blockages. Neglected tanks are also the perfect breeding ground for harmful bacteria including Legionella, E-coli and TBC etc., which makes the water unfit for human use and consumption</p> <p>NB- Strongly recommended to tie a plastic cover with the lid when close the tanks to avoid rainwater entry.</p>
